

# Homepage Dashboard

---

Linux Training Academy

# Lesson Overview

- Homepage:
  - Deploy
  - Configure
  - Customize

# Centralizing Your Self-Hosted Services

- Managing multiple self-hosted apps across different URLs can be **cumbersome**
- **Homepage** provides a single dashboard for all your services
- Access everything from one convenient location

# Easy Sharing Across Your Network

- **Homepage** simplifies access for others on your network
- Share tools by directing users to **one dashboard**
- No need to list each service's name or address individually

## Useful Even for Solo Use

- A **dashboard** helps even if you're the only user
- Great for **occasional access** to rarely used services
- **Easily scan and find tools** without remembering exact names

# Lesson Recap

- Deploy and customize Homepage via YAML configuration files
- Controlled title, background, theme, widgets, services, bookmarks
- Added icons, service monitoring, and dynamic widgets
- You now have a centralized, organized interface
- Bookmark or set as your start page
